Neftali Odin Garcia Ramirez

Full Stack Dev | Node.js · TypeScript · Vue.js · Laravel · Docker ·
Python | Student at Intituto Tecnológico de Morelia in a Computer
Engineer bachelor | Fullstack dev Intern at Tekniu
Morelia, Michoacán, Mexico

Summary

I am a Full Stack Developer and Computer Systems Engineering student at Instituto Tecnológico de Morelia, with hands-on experience building web applications and software systems for real-world projects. I have worked on end-to-end solutions, contributing to both backend and frontend development, from database and API design to user interfaces, authentication, third-party integrations, real-time communication, and deployment. My main stack includes TypeScript, JavaScript, Node.js, React, Vue.js, Nuxt, Strapi, Laravel, and PHP, along with PostgreSQL/MySQL, REST APIs, WebSockets/Socket.IO, Docker, and cloud services. I currently collaborate remotely on software projects focused on business process automation and digital transformation, including operational and administrative management platforms. I am particularly interested in Software Engineering, Full Stack Development, and Backend Development. I enjoy solving complex problems, designing well-structured systems, and turning business requirements into maintainable and scalable software solutions. I am open to internships, professional internships, junior Software Engineering roles, and freelance projects, especially in teams where I can continue growing technically while contributing to real products.

Experience

Tekniu México

Full Stack Dev

March 2026 - Present (7 months)

Morelia, MIC

Full-stack web development at a consulting firm specializing in Odoo ERP solutions for Mexican and international SMEs.

Developed REST APIs with NestJS and TypeScript, following modular architecture principles and backend best practices.

Built responsive web interfaces with Next.js, integrating REST APIs, state management, and reusable components.

Contributed to Odoo implementation and customization projects, including module configuration, business-process adaptations, and client-specific requirements.

Collaborated with the development team in a hybrid, agile environment, participating in real-world development and delivery cycles.

Flama Agency

Full Stack Developer

November 2025 - August 2026 (10 months)

Morelia, MIC

Developed an end-to-end operational management web application for an aesthetic medicine spa, working across both the frontend (Nuxt.js / Vue.js) and backend (Strapi v5 / TypeScript).

Built a centralized patient management system covering detailed medical records, treatment information, medications, allergies, and other relevant clinical data.

Developed an appointment scheduling system with automatic room and staff conflict detection, availability validation, and dynamic appointment duration handling.

Implemented service package management for both procedure-based and time-based treatments, along with multiple payment and appointment completion workflows.

Built real-time communication using WebSockets (Socket.IO) with JWT authentication, including a digital signature workflow where patients receive a signing request, sign from their own device, and the signature is uploaded to AWS S3 and confirmed to staff in real time.

Designed and implemented REST API endpoints for daily and monthly availability, dynamic payment-type resolution, appointment management, and productivity statistics by staff member and treatment area.

Developed custom Strapi lifecycle hooks, services, controllers, and business logic to enforce scheduling rules, automate processes, and maintain data consistency.

Worked across the full development lifecycle, from business requirements and backend architecture to frontend implementation, API integration, and deployment-ready functionality.

Instituto Tecnológico de Morelia

Programador full stack

January 2026 - June 2026 (6 months)

Morelia, MIC

Developed the management system for the Language Department at Tecnológico de Morelia, covering both frontend and backend development. The system centralizes student enrollment, group management, and academic progress tracking for the language programs.

Education

Instituto Tecnológico de Morelia

Bachelors Degree, Computer Science · (2021 - 2027)
